# How to Use the Ba-Gua

1. Align the Ba-Gua with the wall containing the actual front door of the building or the most important entry to a room, even if a side or back entrance is used more often.
2. Projections equal to or extending past the midline can create missing areas. If less than half the total width of the building, a projection creates an enhancement. In borderline cases, check the house history.
3. If a building's shape has many angles or is extremely complex, you may simply apply the Ba-Gua to each individual room.
